# Code Review 1

1. Problem 1. Which of the two visualizations did you like better? Why? Which did you find easier to interpret? Which did you find most insightful?
2. Problem 2, part e. Walk me through your code. How did you map the reservoirs? How would changing to order of Geoms change this plot?
3. Problem 2, part f. How did you incorporate another variable into the plot? What would be another way to incorporate another variable into the plot?
4. Problem 3. Describe how you created the your **favorite** plot in this exercise. Discuss how you found how to change things in the theme().
5. Problem 4. How does the ggnewscale package work? How did you incorporate its features into your plot? Please discuss specific code
6. Problem 5. Discuss your process in recreating this graph. Walk me through your code. What went well? What didn't go well? What was difficult?
7. Reflect on process Describe some challenges you faced while working on this assignment. Detail one specific way you overcame one of these challenges.
8. Is this an assignment you are proud of? Is it a good representation of your work?
